### CUSTOMER TESTIMONIALS

#### THANKS FOR A GREAT PRODUCT

"We have 6 horses (except for our 24 year old Thoroughbred) all are happy and in excellent weight. With our Thoroughbred we have had problems for several years keeping weight on him. He seems to do well in spring with fresh baby grass, but summer comes and he seems to get thin. We have tried oils, various weight building supplements with really no success. Until I found the Omega Stabilized Rice Bran, he finally seems to be gaining weight. Thanks for a great product, even better he likes it."

- Andrea and Chico

### PRODUCT ATTRIBUTES

**Omega Stabilized Rice Bran** is a convenient, stabilized source of high energy and Vitamin E supplement for the diets of your show and performance horses, as well as your young growing horses. The dietary fat in Omega Stabilized Rice Bran functions as a calorie-rich supplement that helps horses meet their energy requirements. It also serves as an additional energy source that does not require feeding more grain in the diet.

**Omega Stabilized Rice Bran** is an excellent source of easily-digestible, palatable vegetable fat (without the mess of adding vegetable oil or other high-fat supplements many horses don't like), Vitamin E, B-Complex Vitamins, essential amino acids.

**Omega Stabilized Rice Bran** is also naturally high in Vitamin E - which is likely to be deficient in the diets of horses that are working very hard or are experiencing high-stress conditions such as training, transportation or harsh environmental conditions. Also Vitamin E is required when horses are fed increased fat levels.
